IMPORTANT: Don't uninstall the app before you follow all troubleshooting steps, because you can permanently lose your game. If you're having trouble playing the app on your Kindle fire device, try it out Steps: Visit the official Amazon website for additional support. Note: The following troubleshooting steps also apply to programs that no longer receive updates and have been moved to legacy status. If these steps don't work, the legacy app might no longer work as expected on your device. 1. Press close the app and all apps running in the background. Swipe down at the top of the screen to access the menu. You can also view the menu by tapping the gear icon in the upper-right corner. Tap More to see the settings, and then select Apps. Tap Filter by from the drop-down menu at the top of the screen, and then select Running Applications. Select the app you want to close, and then tap Force stop. Tap right, then select Clear data. Tap OK again to confirm the selection. Repeat steps 4 and 5 for the remaining applications that you want to close. 2. Restart the device Hold down the power button for a few seconds until the Message Do you want to turn off kindle? Tap Shut down. When the device is completely turned off, press the power button to restart the device. After the device is restarted, try running the program again. 3. Update the app Turn on the Kindle fire, and then tap Apps at the top of the screen. At the top right, tap Store, and then tap Menu at the bottom of the screen. NOTE: If you are using a newer Kindle Fire device, the menu icon may be located in the upper left or bottom right of the screen. At the bottom of the screen, press App updates. You'll see a list of all apps that require updates. Tap Update next to the app you want to update. 4. Update your device software: Download and install software updates automatically: To download a software update, your device must be fully charged and connected to a Wi-Fi network. Swipe down on the top of the screen, and then tap Settings. Tap Device options, and then tap System updates. Tap Check now — If an update is available, your Fire device will automatically download it. After you download the update, tap Update. The device will restart during the software update. After you restart, you'll see the install system update message on the screen. Download and install software updates manually: Click here to visit the Amazon support website for detailed steps on how to manually install updates on your Kindle Fire device. How do I update the game? To make sure that the latest version of the game works, follow these steps to check for available updates: Kindle On the start screen, tap The Store in the upper-right corner of the screen. At the bottom of the screen, tap the Menu icon. Tap App updates. If an update is available, the game will appear in the App Updates menu. Tap Update to install the available update. If you don't see the update option, you might already have the latest version installed. 04-08-2017, 02:03 AM #1 When the game is started, notice pops up that says an update is available and get 5 free diamonds. Diamonds. I click on the update link and I'm redirected to the Amazon App Store. Now I see a game with an open button, but no update button. So, my question is: Has Playfire released an updated version of Amazon yet or amazon just haven't gotten around to adding an updated version yet? Is there a completely different problem? greetings, sign-up 04-08-2017, 02:10 AM #2 Hi Signup We had an update to Android a few days ago. I do not know about Amazon, but try this: shut down the device and restart it. Do not open the game, but go directly to your shop. Look for Fishdom and see if there is an update button. If not, click open from there and see what happens. 04-08-2017, 12:10 PM #3 originally posted by Graylady Hi Signup We had an update to Android a few days ago. So, based on your recommendation, this is what I tried: Went to amazon app store Search fishdom and button saying open automatically appeared When pressed I go back to the game and get an update notification again Then I also tried: Go to Amazon App store Search fishdom update View button was displayed I clicked on it and it said: You already own this app FYI, game description (Amazon App Store) says the latest developer that released 4/6/2017. The room was quite small and the bathroom was quite small. For the record, I'm running an Acer Andriod tablet with Android Marshmellow 6.0 (and Amazon APPStore) installed and Fishdom was downloaded and installed from Amazon originally. Now I also have a new Amazon Fire 9 HD tablet and it also has Fishdom installed; however, when you open a game with this tablet, you'll see a different message. It says: Update is available... get 5 free diamonds I click on the update Now I get another message that says: Continue Amazon Appstore? This app tries to open a link to an external market that isn't available on your device. Do you want to open this link with the Amazon Appstore site? So, I click to continue and it just takes me to the main page of the Amazon Appstore. Now when I look for Fishdom, I get a download button, but I don't want to click on it because I don't know what will happen. Now I really have the 3rd tablet with Fishdom installed. This tablet also works on Android Marshmellow 6.0, but the original Fishdom game was downloaded from the Google Play Store and this So when I click on the game, it opens without notice and I see a fish that looks like an Easter egg. The version is also later than others. It's v2.9.5 and it looks like it's automatically updated on its own. Not sure how to proceed from here, but it clearly seems to be a problem with Amazon Appstore because Google's play version works. Any additional tutorial would be greatly appreciated. greetings, sign-up 04-08-2017, 01:41 #4 Hi Signup Hum... Not sure if Amazon has the latest version then. You are right, the last version of the Google Store is 2.9.5, for Easter. Do you see if amazon, Easter is mentioned? You can contact Amazon and ask them why you can't download this new version. They will tell you if the problem is at their end. If they don't tell you yet that they don't have this version yet, you can send a playrix request from your game if you don't get caught in the loop for the update. 04-08-2017, 11:13 PM #5 Hi again Graylady, Well I solved my problem with the solution: I downloaded Fishdom directly from Google PlayStore. I started out and did something like auto synced to my Google Account that I use in my two other tablets. Now all 3 tablets are level and synced from one Google Account. When this was done, I deleted the Fishdom game, which was downloaded using amazon appstore. Now I'm running 2.9.5 on all 3 pills and got my free diamonds (for all 3) too! And I don't have to deal with Amazon applying future updates either! Thanks for your help and suggestions. Best regards, signup 04-09-2017, 12:02 #6 Hi Signup Great news. I didn't dare recommend this solution without knowing why you used the Amazon store. LOL Long story, but I'll make it as short as I can: Bought 3 tablets (Insignia, Acer, Amazon Fire HD 8); Setup all 3 have access to either Amazon apps or Google apps (bad move). She turned the pills on my wife. She starts mixing downloading games between Amazon and Google on all three devices. (It wasn't her fault. She doesn't have the technical work she's made. I had her tools and she just used them) However, after fixing Fishdom, I wanted to move a few other games from Amazon to Google, but she rejected my newfound curiosities and advised me to stop and abstain. So it looks like I'm out of business until the next times something drastically happens. Cheers, sign-up Last edited with sign-in; 04-09-2017 at 11:24 am. Am.
